

数据库整合 - MySQL

1. 下载

2. MySQL WorkBench

1) 用户管理: Administration -> Users and Privileges

3. 安装mysql模块: npm i mysql -S

1) 连接数据库

```
const mysql = require('mysql')
const conn = mysql.createConnection({
  host: 'localhost',
  user: 'kaikeba_admin',
  password: 'admin',
  database: 'kkb'
})
conn.connect();
```

2) 查询操作

```
conn.query(sql, value, callback)
```

3) 参数传递

```
conn.query('select * from user where id=?, 1, cb)//单个参数
conn.query('select * from user where name=? and age>?', ['tom', 20], cb)//多个参数
```

4. 项目功能:

1) VIP课程查询

```
query('select * from vip_course')
```

2) 公开课查询

```
query('select * from open_course')
```

3) 解决回调地狱: async/await

```
async function(){
  try{
    const result = await query();
  }
}
```

4) 分页查询

```
const currentPage = req.query.page || 1; // 获取当前页码, 如没有则默认1
const pageSize = req.query.pageSize || 1; // 每页条数
const offset = (currentPage - 1) * pageSize; // 计算偏移量
const sql = 'SELECT * FROM open_course ORDER BY time DESC LIMIT ?,?'; // LIMIT offset,size
const results = await query(sql, [offset, pageSize]);
```

数据库操作

CRUD

增 Create 'INSERT '

查 Retrieiv 'SELECT '

改 UPDATE 'UPDATE '

删 DELETE 'DELETE'

作业:

1.复习本次课知识

2.尝试完成分页组件

3.预习: multer处理文件上传, RESTful API编写, cors解决跨域, Axios第三方API调用
